I think the environmental issue is a human rights issue. I am fortunate but so many in coastal areas and low lying flood areas, and houseless are not and they may not have the means to recover after storms flooding, fire, heat or extreme cold temperatures We must do something so everyone including wildlife and natural environment, are taken care of. I believe the individual is not enough that big business needs to make the changes to save our current climate crisis. Stop taking fossil fuels, start using environmentally safe practices and products. Make laws requiring manufacturers do these things.
Thank you,
Kim Streuli
