Not sure why R&D and Conservation get a 5 year tax credit carry forward period, and Film and Video gets three. Shouldn't we give all the same number of years of carry forward?

It seems like solar thermal should be included in the definitions on page 25. Section 27 (4)

Section 39 (1) where energy savings over the first five years is used seems in conflict with (3) where it is energy over the lifespan of the facility.
