Subject: pesticide hearing

I found out there's a hearing today, April 1, at 3PM on a bill that requires pesticide spray reporting to Department of Environmental Quality!!

I do not believe this is a necessary bill because it will have added time and expense for us as farmers and the government will have to hire extra people to take on this new position.

We already have notes of our spray records available as needed and any extra paperwork during our busy day/season will add unduly to our work load. Please consider this as you talk about this unnecessary bill.
