### Support letter for HB 2922 Health Care for All Oregon

This is a vital and inevitable step in the health care revolution.

Health care costs are exploding and a single payer system will reduce costs.

It eliminates the profit element from having insurance companies run the system and the enormous cost of assessing claims

The USA spends one and a half to one and three quarters that spent by other major industrialized countries as measured by GDP and yet scores worse than over 30 other countries on standard metrics for measuring quality of health care.

No citizen should be deprived of health care. Nor should they have to go bankrupt.

It will make companies more competitive overseas when they no longer have to figure health insurance costs

It will relieve countless worries by people over whether they can have access to health care.

Thank you.
