It is crazy and stupid for us to pay more than other countries for health insurance and get worse outcomes: our standings worldwide are in the thirties for health care in general and are not good for specifics such as infant mortality and longevity either. We do have more high tech machinery available here but that certainly doesn't outweigh the other. Although I can pay for health care and am glad to do it (considering the consequences) I have many friends who can't get care through their jobs. Others have lost the care they had when they lost a good job. We are not the healthy country we could be and I suffer seeing the need for more to be done. A government sponsored universal system seems the best way to go with people being able to supplement that with private care as well. I urge you to vote for this bill. Thank you.
