

I wish to add my voice to SB462a to disallow a composting and mining facility in an area less than 1500 feet from schools. There are many adults and children with asthma, and the schools at a minimum need to be kept safe for kids attending them and residents living near those schools. Like many others, I am also extremely concerned about the aquifers in the area; once contaminated, the water will be undrinkable. I hope SB462a will be passed so that facilities such as these will never be able to be placed in an unincorporated, residential, rural area in any county.
