Professor of Medicine

Sarah West, M.D.
Assistant Professor of Medicine

Thomas R. Yackel, M.D., M.P.H., M.S.
Associate Professor of Medicine

DATE February 4, 2013

TO: The Honorable Mitch Greenlick, Chair
House Committee on Health Care

FROM: Elizabeth Eckstrom, MD, MPH

SUBJECT: Support for HB 2092, Injury Prevention Program Bill

Chair Greenlick and members of the committee:

I am writing to encourage you to support HB 2092, which would require OHA's Public Health Division to establish and administer an injury and violence prevention program.

This bill would establish clear authority for the OHA to conduct population-based activities to reduce injury and violence, and conduct activities with partners throughout the state to reduce injuries due to accidents, suicide, homicide, and poisoning. Currently, OHA has regulatory authority to collect data on diseases. Extending that authority to cover injury is a logical next step.

Injury is the third leading cause of death in Oregon, behind only cancer and heart disease. It is also among the leading causes of hospitalization. It is typical to consider some causes of death – cancer, heart disease, stroke – as mainly affecting older Oregonians. However, everyone is affected by injury, regardless of age, sex, or race. The good news is that injury is predictable and in many cases preventable.

The Injury and Violence Prevention Program is the primary resource in Oregon for state injury data. Staff routinely provide epidemiologic expertise, data, and technical assistance to individuals, agencies, policy makers, and other partners outside the program. Surveillance data have been used to determine the burden of injury in Oregon; to assess the impact of policy implementation; provide analysis to prevention partners; to publish reports and research; evaluate injury outcomes and assess policy implications; provide information to the news media; and to guide policy initiatives.

IVPP collaborates with groups, organizations and agencies engaged in trauma and acute care, emergency medical services, chronic disease prevention, environmental health and the built environment, maternal and child health, school health, traffic safety, law enforcement, victim's services, and occupational safety to implement programs and policies aimed at reducing the burden of injury in Oregon.

Our organization has partnered with IVPP on programs such as STEADI (Stopping Elderly Accidents, Deaths, and Injuries), which aims to integrate clinical practice with evidence-based community programs to prevent falls and fall injuries among the elderly in Oregon.

I hope that you will support this bill.

Sincerely,

Elizabeth Eckstrom
