

3/11/13

SB692 Public Hearing March 11, 2013

To the legislative committee:

This bill the way it is wrote, will hurt small business by raising the cost to purchase new equipment. Forcing them to fix their old insufficient equipment. It will also hurt the wholesalers that stock this equipment. After the date cannot sell it in the state. The efficiency changes that occurred four years ago, caused the wholesalers to lose million of dollars and is causing them to not stock equipment, slowing down economic growth and cutting jobs. Federal efficiency standards are set by data manufacture and not the date of sale. Which is much better for the wholesale network.
