

Senator Bates,

PLEASE! Senate Bill 633 is a pre-emptive bill that would make any regulation of agricultural products, especially seeds an exclusively statewide issue. This would pull the rug out of our efforts here in Jackson County to be <sup>Crop</sup> GMO Free.

My concerns are many on this issue. First of all, the best government is local government. To take away local say and control of any issues is an act of taking away from the people and giving to the state, hinting of communism, and more control, less freedom. Please VOTE NO and SPEAK NO! on SB633 and HB3192!

Also, I understand you are a physician. Please educate yourself on GMO's. There are documentaries and health studies that are very alarming about the health and environmental effects of growing GMO crops and consuming them.

There is an ongoing newsletter online called "Natural News" with a lot of information concerning worldwide health issues including GMO's.

Also "Genetic Roulette" and "The World According to Monsanto" are excellent documentaries, very informative and alarming. PLEASE, Do some studying on this and support our efforts to make farming truly sustainable and our health a priority.

Sincerely, Daniel S. Gregg
