Dem Senator Bates,

I have recently become aware of Senate Bill 633, which removes local choice or control of agriculture. Please do not pass this bill.

In addition to limiting choices of local farmers, there are many health issues that are affected by GMO products. Some of these, generally, are GI problems of a significant issue, neurological issues, allergy issues. Those that work on farms are affected by pesticides + herbicides used with these ~~pest~~ crops. Phytotrans for Social Responsibility are concerned and working to improve our food safety. Passing this bill will affect the safety of our food.

Thank you for considering the issues involved.
