**Subject:** Fry Family Farms (I stand with) no to GMO; get stuff labeled; Pesiticide free; Stop killing humans and animals with poison.

To Shane Smithe, Media, Racuel Rancier, et al:

In India greater progress along these lines is being made...that is the non spoiling of crops and seeds by Monsanto and other companies.

Crops free of pesticides and non GMO crops are essential for health for humanity. Science has proven it and it is a fact--GMO has created deadly super worms be aware of this too.

Therefore I stand with the farmers and with Fry Family Farmers.

The fact is Organic crops ought not be at the mercy of those who spray their own crops since the poison travels in the air and contaminates people, water, pets, animals and other crops. This is also true of GMO seeds that hurt nearby crops. We all need to be more aware.

Mexico has already woken up to this. As have numerous other Countries. We should not be last.

Please do not support SB 633.
