I am commenting on the Bill H.B. 4044.

My concerns are on the validity and the assumptions that all the wells within one mile of the Sprague River are drawing water from the river.

I have a artersion well that when shut off shows 37 pounds pressure. This well will run 2,440 feet of sprinkle irrigation or 60+ sprinklers at 23-25 pounds pressure. In my opinion, I can not see how this well could do that and be drawing from the river.

I would like the opportunity for my well to be proven one way or another, rather than just assuming this well is commingling with the river.
