Testimony in Support of House Concurrent Resolution 14
Going before the House Committee on Healthcare
February 13, 2015

I believe March 26th should be designated as Purple Day to raise awareness for epilepsy and those living with it. To be able to raise awareness for those with epilepsy is very important because it is a topic that can be scary to some, especially if they are not aware and do not have background information on the topic. I also think it is important to designate March 26th as Purple Day because it shows a support system for epileptics and proves that they aren't in it alone. The more aware you can make people of epilepsy and the disorder the more open and it will be. I believe this will provide a good foundation to grow support to an overwhelming amount of support in the state of Oregon over time.
