

PRELIMINARY STAFF MEASURE SUMMARY**CARRIER:**

Senate Committee on Senate Health Care

REVENUE: No revenue impact (introduced)**FISCAL: May have fiscal impact, statement not yet issued****Action:****Vote:****Yeas:****Nays:****Exc.:****Prepared By:** Zena Rockowitz, Administrator**Meeting Dates:** 2/16

WHAT THE MEASURE DOES: Expands crime of assault in the third degree to include intentionally, knowingly, or recklessly causing physical injury to health care providers in hospitals. Defines health care providers as person licensed, certified, authorized, or permitted by law to administer health care in ordinary course of business. Declares emergency, effective on passage.

ISSUES DISCUSSED:

- Increase in violent acts at rural and urban facilities
- Impact on people with dementia and mental illness
- Deterrence factor for assailants
- Higher rate of violence for health care workers than other professions

EFFECT OF COMMITTEE AMENDMENT: -1 amendment Defines health care provider as a person providing health care services. Adds definition of health care services.

BACKGROUND: Oregon law considers crimes against certain professions to be assault in the third degree: operators of public transit vehicles, staff members of youth correction facilities, emergency medical services providers, and operators of taxis. Hospital workers have a higher risk of violence in the workplace than other professions. In 2013 the Bureau of Labor Statistics reported that in the health care sector, 13 percent of injuries and illnesses were a result of violence in the workplace.

In 2007 the Oregon Legislative Assembly passed House Bill 2022, which requires hospitals and other health care facilities to implement strategies to protect health care employees from acts of violence, such as assault. These entities must have prevention programs and training, as well as ongoing security and safety assessments. The law also requires the Oregon Department of Consumer and Business Services (DCBS) to collect and assess data on assaults over a one-year period. DCBS found that in 2008, for the 1,061 assaults recorded, 99 percent occurred in a hospital, of which 50 percent were in the behavioral health/psychiatric unit, 13 percent in the medical/surgical unit, and 11 percent in the emergency room. The majority of victims were identified as nursing assistants, orderlies, or aides (42 percent), or as registered nurses or licensed practical nurses (32 percent). Nearly 100 percent of assailants were patients. DCBS reported that 80 percent of assaults resulted in minor injury, 18 percent involved major soreness, lacerations, and large bruises, and two percent involved bone fracture or head injury.
