Subject: SB 824

Subject SB 824:

We support HB 3310. Oregon has become a dumping ground for old diesel engines often sent in from California where they are no longer allowed. Our population is being exposed to the toxic emissions on a health threatening level. My husband owns Whitman's Cornelius Auto Repair a full service automotive repair shop. He see the problem from old polluting diesel trucks on a weekly basis.

When we are forced to sit in a traffic jam or behind a school bus we realize that our children and grand children are subjected to this poison and their health and learning ability are being compromised. Industrial generators adjacent to communities make the atmosphere unhealthy.

Please pass the strongest protections for our State.

Thank you for considering our concerns,
