**Subject:** Help advance Pollution Cap HB 3470

Greetings, Ms. Patrino;

I have been researching global warming/climate change for the last 20 years or more. The latest, best peer reviewed science on this issue is at the very least, alarming. Over 30 positive climate change feedback loops have kicked in since 2011, speeding up this crisis. Every day we put off significant action on this issue, the problems resulting become potentially catastrophic. This is not an exaggeration. Oregon HB 3470 would be a good start for the state of Oregon to help mitigate climate change. At every level of government as well as business and individual; significant and real action is needed. Energy and resource conservation, alternative use of resources and

clean, renewable energy infrastructure needs to be invested in and prioritized.

As a government worker, you have a duty to do everything in your power to help Oregonians have a healthy future. At this point that is in real danger.

Please help advance this bill forward!

Pamela Driscoll
