Subject: Bill against the wolves

I want the wolves voices to be heard!!! Iam not a hunter. Iam also not against hunting. When I was little my dad hunted all the time Sometimes he would sit or go out for days and not come back with anything!! Other times once in a great while he came back with what he set out for. I was always told growing up that each animal that was put on this earth had a purpose , a reason for being here. To this day at the age of 36 I instill the same logic into my son on a daily basis! The wolf is the most persecuted, misunderstood animal!!! I have grown up all my life around very high content hybrid wolves. Their family pack hierarchy is such a strong bond that most human families could learn a thing or two about respect, status and the way they teach their cubs to humans instilling values and life lessons in their children. Really the are the same as we are it's just a different environment. There was a reason that the native americans respected and worshiped these majestic creatures that were on this earth long before we ever were. They have lived centuries with being persecuted and nearly eliminted at the hands of humans , yet they manage to still survive barely. They are not human killers like the Fairytales portray!! They do not kill other animals for fun , they kill to feed their families like humans work a job to feed their families!! It's a sad day when an animal is eraticated off this earth by the hands of humans. That's what is gonna happen.. Ranchers, Farmers and Goverment should all work together to create programs that benefit each other with out eliminating and to protect all the low population of wolves. Please reconsider not passing this bill. The wolves need a break they have lived in fear long enough!!! They are a very elusive animal due to humans hunting them to nearly nothing left!! The only Fairytail that I see here is the Humans playing the Big Bad Wolf and Grandma the wolf being killed to Extinction! !!!!
