Subject: Climate Stability and Justice Act (HB 3470)

Dear Chairman Pederson and members of the House Energy & Environment Committee,

I am writing to urge your support of the Climate Stability and Justice Act (HB 3470). As best as I can tell, this bill makes sense, is in our greater good, and is in close alignment with an increasing number of our neighboring states.

Incidentally, from what I can tell, much of the argument against this bill is based upon a patently incorrect and highly selective interpretation of climate data. (This is plain enough that even I, a mechanical engineer and ***not*** a climatologist by any stretch, could tell this by a just quick skim of those arguments.)

Please do all you can to advance HB 3470 in this legislative session. Please pass this bill on Tuesday.

Sincerely,
- Doug Viner
