

AOC Supports SB 133

To: House Committee on Business and Labor

Several years ago, the State Building Codes Division approached local government and contractors with a plan to implement a system of electronic building permit services. The permitting system is used by many counties and cities across Oregon. As users and supporters of this unique state and local government partnership, we strongly encourage the legislature to continue this program.

With this program county governments are able to provide for electronic tracking and accounting of our building inspection programs and provide services on-line to our customers. We all benefit from the use of a tried and true vendor through the state's program and spend our scarce IT resources on other needs within the county. This is an example of a program that works and we want to continue this effort. If you have any questions, please contact AOC Policy Staff Mark Nystrom (mnystrom@aocweb.org)

Thank you for your consideration.
