

You are receiving this email from me, because you are in a position to decide if HB 3470 advances to be considered by the Legislature. I am hoping you will allow this. I say that as a parent who has looked into my son's eyes as he tells me how he feels about the destruction he sees our generation committing for vain profit with callus disregard for the consequences that will befall his generation. In actuality, we are already starting to pay the price for our greed. I know that the deniers say that this measure is too little to be helpful, so you should vote against it. But, a wise man once said that the journey of a thousand miles begins with one step.

Please ensure that the House and Senate vote on HB 3470 bill this session. House E & E Committee HB 3470 provides state of Oregon's support for responsible Greenhouse Gas Emissions reductions. This bill deserves a vote and consideration by the Oregon Legislature. It would responsively set required reductions in Green House Gas Emissions. The bill is Oregon's opportunity to take effective leadership in Climate Stability and Climate Change Justice for all Oregonians.

Please take this one step,
Thea Parker, RN
