

To all:

That is so sneaky in timing to push the GMO/Monsanto agenda on the very day when the law case to protect farmers from GMOs is being held in Medford, OR.

You undermine the very purpose of voters declaring their legal wishes through the democratic process.

Couldn't you have waited for the case to be decided?

In addition, you are becoming a front-group for corporate interests. Corporations that are only concerned for their profits, even when their sales harm human and general environmental health.

Nature had a good system, developed over millions of years. GMOs throw unknown consequences into the natural system. Let's stop meddling with nature!

Helga
