

Dear Committee,

HB 2509 would require farmers who have been contaminated by GMOs to engage in an unfair mediation program, before they could file suit. If they didn't, it would require farmers to pay (potentially hundreds of thousands of dollars) GMO growers attorneys fees for contamination by GMOs! This as well as HB 3212 is so nakedly preposterous and outrageous in their most obvious special favor for GMO growers!

We need to get rid of the GMO crops in this time when they are contaminating natural and organic crops as we are losing our exports and natural plants and environment. This GMO experiment in the open environment is much too dangerous and risky especially as it has been shown that there is no real benefit to using GMO crops and they are potentially dangerous to our health, pollinators, environment etc. The only benefit is for the chemical companies to sell more of their chemicals and "seeds".

It is highly irresponsible for you to allow this contamination to continue in the first place! Please protect us, and the environment and family farmers growing natural plants. These are dangerous and frightening times.
