Subject: Vote against HB2509

Dear Honorable Senators:

Please vote down HB2509. The use of GMOs must be stopped. The current methods and philosophy behind the use of GMOs is detrimental to our planet and will, if not ended, be the actual death of the human race. Instead, let's encourage as much organic food production as possible and make it easier for more producers to go organic. Furthermore, we need to support research that will find new sustainable ways to produce healthier food for the Earth's growing population. This is a fact we must face as a species. Please do the right thing for your fellow man.

Thanks for listening,

Janis Hunt Johnson
