

I urge you to support approval of the Climate Stability and Justice Act HB 3470. We must take pro-active action as soon as possible to reduce greenhouse gas emissions and to reduce rapid anthropogenic climate change. The consequences of not doing anything are unacceptable and we have a short window left during which we can still make some difference in heading off environmental, social and economic catastrophes. We need Oregon to be a leader in setting limits in greenhouse gas emissions. As an Oregon resident I am willing to pay short-term costs and do not want leave a much bigger burden on my children.
