

To committee members:

Will you support this climate change bill? As a resident of Oregon these past 35 years I wonder if it may be too late to save our world? There is no leadership from the federal level, and grassroots efforts go unheeded. The science around climate change and carbon cycles is indisputable, yet everyday policies continue to favor no regulation, no urgency, and the carbon in our atmosphere numbers going ever higher. Does anyone even talk about methane numbers?????

If only Oregon could show some leadership, and pass this carbon control legislation. Sure, industries and big business (big money) don't want to change the status quo, but you can make this happen: carbon tax will impact everyone's usages. We can make the change to sustainable energy policies. Everyone will benefit.
