

Dear The Oregon State Senate and Governor Kate Brown,

We are pleased to present you with this petition affirming this statement:

"The Oregon State House of Representatives has recently decided to pass HB 3212, which undermines Jackson County's bans on GMOs. This bill is an example of the state legislature kowtowing to corporations like Monsanto and Syngenta who don't like it when municipalities vote to restrict the use of their seeds.

But this bill doesn't just impact Jackson County -- it can have ramifications all across the state. It's going to take all of us, speaking out together, to reverse this ban on local communities making decisions about what's best for them."

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,
Benjamin Gerritz

GMOS are a major problem in this world. In fact it is such a problem that 64 other countries already ban GMOs. GMOS have been linked to Cancer, bee deaths, antibiotic resistance, resistant bugs, environmental harm and death. We have the right to know what is in our food. We have the right to ban GMOS if we want. HB3212, undermines the voters will and the handwork of activists who got the measures to ban GMOS passed. Companies like Monsanto and Dow do not care about anything but their pocket book. For example, a new pesticide with 2,4-D,, an active ingredient of Agent Orange is being produced for the market. 88% of your corn and 92% of your soy is genetically modified. GMO corn, has BT toxin in it. BT toxin is a pesticide and so basically you are eating corn with a side of pesticides. Though I dislike free-market society and capitalism, these types of economics allow for diversity, and yet we cannot avoid GMOS, unless we try hard to do so. Stand up for your health, the planet, and your future and vote NO on HB3212, thanks.

Please don't let multi-national corporations decide what's best for Oregon. Jackson County overwhelmingly voted to ban the growing of GMO crops (66% in favor of the ban) to protect the seeds of organic & conventional farms. It's not right for big money to over rule the will of the people.

I am absolutely opposed to HB 3212. Just as is the case with many politicians in Washington DC, Oregon representatives have forgotten who they work for. Passing such a bill that makes local voices ILLEGAL, giving our rights and protection to Monsanto and Syngenta, tells voters just where they stand. We are depending on the Senate and the Governor to defend local voices and rights against corporate domination.

The voters of Jackson County has spoken on the gmo subject and the legislature has no right to change the will of the people. Seems to me that there is work needing to be done instead of trying to undo what the voters have spoken on. This is not what they were sent to Salem to do. We have the right to protect our food, and to know what is being done to the food we eat. I will certainly think long before voting for any politician that votes for this bill or any other like it.

I vote... I will vote for another candidate in the next election if you allow Monsanto to do this. I DESERVE TO KNOW WHAT IS IN MY FOOD. AND I DESERVE TO KEEP MY FOOD SUPPLY CLEAN OF GMOs AND PESTICIDES AND HERBICIDES. ALLOW OREGONIANS TO DECIDE ON BANS FOR GMOs. Oregonians do not want GMOs on our dinner plates. We do not want cancer or disease that accompanies GMO foods. Please vote in favor of Oregonians. Think of yourself as an doctor. First, to do no harm to the citizens. In order to understand this you need to look at the reason that most of the world is putting bans on GMO crops. We do not want Monsanto to have an illegal monopoly on food. May i suggest as a tax payer, I believe it is your responsibility to protect the Oregon population from this danger. Your vote is being watched and the voters will respond in the next election. I'm grateful that you are watching out for me. Thank you Robb

May 23, 2015

The state should not block communities from choosing how they want to live and govern themselves! We are appalled, with good reason, when states block communities from setting their own minimum wage, or from protecting LGBT citizens, or from limiting fracking. This is no different. Furthermore -- Oregon tilth organic standards are meaningful and likely increasingly valuable in a future where truly non-GMO crops are ever more rare. Why wouldn't the state treasure this resource and protect a potential future goldmine? Once genetic drift has contaminated a crop, it's very difficult to recover from it. Oregon should protect our resources, not sell them short.

What? How can our own State House Representatives pass this bill? All across our state, our land is in jeopardy in providing the quality of food we demand for our children and families. We cannot let this happen. Speak Out and Together we can reverse this ban on local communities making their own decisions about what kind of quality and sustainability we know is important for Oregon.

I'm appalled at the ignorance of the Oregon House of Representatives. The citizens of Oregon deserve better representation.

Michael Welsh
Medford, OR 97501
May 23, 2015

I am outraged that the Oregon House of "Representatives" decided that Monsanto is more important than the voices of Oregonian Citizens! This corporation spent tens of millions of dollars to spread LIES about the benefits to all of us about the labeling of GMOs and defeated a citizen ballot measure by a miniscule margin. Now they're influencing (read buying off) the Oregon legislature to be able to continue to peddle their poison and to make it the law of the State. This is NOT DEMOCRACY. This is not listening to the voices of the people you are supposed to represent. This is not in the best interest of our State. The only entity that benefits from this bill is a multinational corporation that cares only about profit at the expense everything else.

Aside from the damaging abuses of Monsanto's (etal) increasing monopolistic control of agribusiness here and abroad, just the impossibility of containing modified genetic material to any planted field and preventing contamination of other farmers' fields (recall the market embargoes of Eastern Oregon wheat shipments) should cause sufficient concern toward resisting corporate bullying of Oregon citizens... Consider where these companies' interests lie,, certainly not with Oregon farmers; we have state universities developing seeds for our particular climate and our Oregon interests. It may not be possible in the end to resist the increasingly powerful resources of Monsanto and friends, but this is Oregon, and we do have a proud reputation often doing the right thing against formidable adversity despite prevailing acquiescence.

Don Courtney, MD

When do our legislators get a backbone? When do they realize the actions of Jackson County are the true actions of a democracy?

Diane Cadonau
Hillsboro, OR 97124
May 23, 2015

KATHRYN EVERS
hillsboro, OR 97124
May 23, 2015

Monsanto takes advantage of the less fortunate and creates a system that takes advantage of farmers, feeds harmful GMO products to low income populations, and patently misrepresents scientific findings which link GMO to cancer. If government regulation (or morality) won't limit their reach, it's up to the people (us) to demand ethical, healthy, honest products.

The effects of this bill would go far beyond the issue of local bans on GMOs. It would provide financial compensation to any entity (individual, farm, or company) affected by any new regulation regarding farm practices. For example, let's suppose that Oregon's voters determined that burning of agricultural waste, which currently is unregulated, should be controlled, for reasons of public health, pollution, and global warming. Under the provisions of HB 3212, any entity limited by the new burning laws would be entitled to compensation. In other words, that entity would have to be paid with public funds for its costs in complying with the new law. The idea that we must pay people and corporations to comply with new laws is an incredibly expensive and dangerous slippery slope. It is a direct assault on the power of Oregon's people to govern their communities and their state. And it would bring outrageous transfers of public funds and powers to corporate interests such as Monsanto and Syngenta.

We need, indeed demand, the right to know which crops have been modified to accept the spraying of Round Up and other chemicals. Getting chemicals out of our food supply is important to our Nations health. We at least should know which they are in order to choose what we eat.

Let's start with Oregon and stop Monsanto altogether!! Any crop that requires farmers to use mass amounts of Roundup on its crops daily is a terrible idea. Homogenizing the worlds crops leaves them vulnerable to disease/blight that could wipe them all out in one fowl swoop! Biodiversity is the smartest, safest, healthiest option. Monsanto 'might' have good intentions, but in reality their model is a terrible, poisonous idea. No to Monsanto at all costs!!!

If we want more local control at the state level (from the federal government,) why isn't the state giving more local control to the counties? Corporations know that it's easier to sway state legislators than all the county commissioners - so they lobby at the state level to ban what should be decided by the counties.

Although there isn't (yet) proof that GMO's may be harmful, the history of trans-fats and other so-called improvements to the food chain indicates more caution. It's been easy enough (if informed) to avoid some food additives but GMO's will have a lasting legacy to the entire food chain. It has also been shown to disrupt the eco-system since flora and fauna have struck a balance over the millennia. Opening the door to GMO's also allows Round-Up to be used since Round-Up use is what made the weeds resistant in the first place. Additionally, negating the power of the people to decide what they want to breathe and allow into the water supply.

I live at ground zero on this one. After voters passed a ban on GMO farming in Jackson county, a few Syngenta and Monsanto backed farmers sued the county to either repeal the measure or pay them millions in damages. The matter is still being decided.

This is a matter of significance to me as someone who cares about what my family eats, and for the ability of Oregon agriculture to export to the EU, for instance, and other countries which may ban GMO agriculture in the future. Please do not undermine the ability of local jurisdictions to enact agricultural protections against GMO genetic encroachment to other crops and plants generally.

I believe all Americans have the right to know the truth about the toxic processed foods diet including Genetically Engineered (GE) Monsanto created crops. Furthermore, GE crops, factory farm produced foods that use pesticides, antibiotics, and other harmful chemical cocktails to produce more lean meat have weakened human immune systems and are causes of obesity. These statements do not included harmful effects on other earth species and/or devastating effects on the planet earth we all call home. In closing, your children, grandchildren and great-grandchildren will look back at the poor decisions made and you will be vilified, as stupid but not ignorant. I'm begging you to stand up for future human generations, all species on the planet, and the viability of our earth home, please!

Don't let Monsanto or any other company make choices for the rest of us. If corporations have rights similar to that of an individual, then their opinion should count as a single vote. If dollars count for votes more than people do, we no longer have a democracy. If this passes, we even loose some freedom.

This "Too big to Fail" mantra of Big Ag is economic slavery for the independent middle class who choose and voted as a majority for a healthier choice. Monsanto, et al motives are connected to the fair trade agreement of economic supremacy. This is masked in freedom but only for the few. Upper class on the backs of the serfs...middle class. Is this what the Oregon legislature is proud to be?

let US decide how to kill ourselves, not some chemical companies CEO with his eye on profits.

GARY KILLPACK
Lincoln City, OR 97367
May 23, 2015

I voted on this measure. The people voted on this measure to ban GMO crops in our community. Not a single rep who voted to undermine this democratic process will have my vote in the future. Don't undermine democracy. State rep's job is to support the people, not undermine us or show preference for companies.

Megan Mercier
ASHLAND, OR 97520
May 23, 2015

Unfortunately, the Senate President, Arnie Roblan, (D-Coos Bay) is a supporter of all GMO legislation in Oregon irregardless of constituent opinion.

Monsanto somehow bends the will of our elected government officials to make decisions that are not in the best interest of "We the People". This practice of corporations like Monsanto buying political favor with the profits they earn while destroying the environment must end. Corporations are not people. You are charged with doing what is in the best interest of the people. Stop Monsanto.

The state has no right to overturn the votes of the citizens of Jackson and Josephine County. Independent research on GMOs clearly demonstrate the dangers to human health and to the environment. The only reason the state would ignore this is due to corporate pressure/funding. Oregon is uniquely positioned to develop a lucrative non-GMO economy. Please read the research, watch the movie GMO OMG (with Elisabeth and Dennis Kucinich), think about the future of our seeds. We are the GLOBAL resource for organic seed. You have the power to position Oregon as a leader in this movement. 66 countries worldwide have already banned GMOs. It will happen here.

Why isn't the U.S. still in support of this country, their bullying tactics to farmers, their questionable products that may not be healthy for living things. Not even for air or water. Why do so many countries ban their products because they are concerned about safety. But the U.S. still supports them? So wrong! I say boycott all stores that sell obvious products, such as Roundup, till they are pulled from stores.

Most developed nations do not consider GMOs to be safe. In more than 60 countries around the world, including Australia, Japan, and all of the countries in the European Union, there are significant restrictions or outright bans on the production and sale of GMOs. In the U.S., the government has approved GMOs based on studies conducted by the same corporations that created them and profit from their sale. Increasingly, Americans are taking matters into their own hands and choosing to opt out of the GMO experiment. That seems to have hit a snag in the State of Oregon with this HB3212. Unfortunately, even though polls consistently show that a significant majority of Americans want to know if the food they're purchasing contains GMOs, the powerful biotech lobby has succeeded in keeping this information from the public. I urge you to take a strong direct stance against the corporate takeover, and vote instead with the people of the state. We live here!

We can not allow corporations such as Monsanto to use the government of Oregon to change the will of the people! Jackson county voted to not have GMO crops grown in their county. How can the State of Oregon take that away? This is not the Democratic process. I am so disappointed in the Democratic party for passing Kitzhaber's SB-863. The citizens of Oregon will not allow their right's to be taken away or allow the people we elected to be influenced by corporations. We will use our vote, social media and any other form of conversation to point out all Democrats that support HB 3212. If they support this, they will not be voted in again. Multnomah county supports Jackson County!

I because Monsanto and Syngenta is doing the exact same thing in Hawaii by getting their ways in corrupting legislators to do their bidding to protect their profits at the cost of your local sustainable farmers who were there first prociding for your state and others. You need to protect your citizens your local farmers, organic and non GMO please do this before it's too late. Not only does your citizens and local farmers lose, you and your own family will lose big time. Do the right thing at least by your own family members, especially your are young children and grandchildren. Thank you for thi opportunity to comment.

The union of concerned scientists has pointed out legal techniques that Monsanto has used to suppress independent research about GMO's. The reason most research on GMO's is positive, is because it is funded and conducted by Monsanto. This is not scientifically valid. I am a medical student and and very concerned about the yet independently studied long term effects of GMO's upon health. It is already clear that farming methods used to cultivate GMO's are destructive to the ecosystem. This is unsustainable.

For Many Oregon counties Organic Agriculture is the primary growth industry. Any contamination from GMOs could seriously hurt the extensive organic dairy industry that already exists. Allowing GMO seeds in Oregon has the potential to kill one of the fastest growing grass roots industries in the state. A GMO ban is in the best interests of all the citizens of Oregon.
