

Dear Senators,

**I urge you to oppose HB 3212.**

This law threatens neighborhoods, schools, and sensitive crops which would be affected by pesticide drift from aerial spraying of toxic chemicals. It would hurt our ability to protect family farms from contamination by GMO's. It would affect animal welfare laws, water quality and water conservation. It would compensate land owners for any limit to their ability to engage in harmful practices.

In short, it's a very dangerous law that takes power from the people and compromises our health and welfare.

Sincerely yours,

Mel Ginsberg  
Ashland
