

Having worked on Cap & Dividend for some time I am convinced that this scheme on a global scale represents the only way to prevent a post-industrial rise in mean global temperature rises in excess of two degrees Celsius. This is vital 2 degree C as there is now evidence that the current 0.8 degree C rise in temperature is already damaging and that 2 degree C represents the boundary between dangerous and very dangerous climate change.

Oregon could lead the World by introducing Cap & Dividend locally.

With all good wishes,

Dr David P. Knight, CapGlobalCarbon.
