

Please move HB3470 out of Rules as quickly as possible so that it has a chance at serious debate and passage this session. There is no time to waste. Global warming is accelerating. it's now evident in everyday existence. Climate scientists agree by a consensus of over 1000:1 that the cause is anthropogenic. Species are going extinct at unprecedented rates and irreversible catastrophe is looming. This is no "Chicken Little" story. You must act now to set a price on carbon that fairly reflects its societal cost.
