

## BUILD OREGON'S INNOVATION ECONOMY

### SUPPORT SB 611

### JOBS FOR OREGON

Oregon's role as a tech leader has just begun. Let's spur additional investment by providing a clear road map for companies considering expanding here.

More than \$1 billion of projects from companies including Apple, Facebook and Amazon are at stake. Let's give technology a boost in Oregon by providing tax certainty.

**It Creates Legal Certainty.** This bill resolves ambiguity so companies will be able to locate data centers in Oregon without the fear of central assessment.

**It's Rational.** Data center companies make significant capital and community benefit investments in their local communities. Central assessment would excessively and unnecessarily burden data center companies, hindering growth and preventing new companies from moving into the state.

**It Supports Economic Growth.** Data centers generate multiplier-spending effects that benefit workers and business owners in local communities. Data center construction generates hundreds of millions of dollars in economic impact beyond the amount directly spent by an individual company

**It Promotes Business Development.** Rapidly expanding companies such as Facebook brought high paying jobs and community investment through data centers. Others have followed as they saw Oregon as a welcoming place for innovative businesses. Now companies like Amazon have multiple data center projects hanging in the balance.

Let's Put Oregon's Tax Policy to Work for the Future
