

Statement of Support for HB 4122 from Oregon Farmers and Food Businesses and Organizations

We support family farmers being able to protect themselves against the threats of genetically engineered (GE) crops. The State of Oregon has failed to protect farmers from unwanted contamination from these crops. Farming practices are diverse across the state. Voters and local governments should be able to address issues with genetically engineered crops at a local level in order to protect local agricultural communities. I support bills like HB 4122 (Feb 2016) which put local voting rights on GE issues back into the hands of local communities.
