

Dear Sirs,

I must comment on Rep. Vega Pederson's testimony that Eastern Oregon should take the brunt of renewable energy development to meet the state Renewable Portfolio Standard. To be so ignorant as to think that all of Eastern Oregon is willing and open to having their homes next to an industrial wind turbine complex or a jungle of solar panels is ridiculous. Ms. Pederson should educate herself as to the impacts this will have on residents living in our area. Further, she may want to experience for herself what this renewable energy development is really like to live next to. I find it appalling that this legislator who lives in the valley and has no real grasp of what that sort of development means for us, is sitting down there in Salem making these sort of statements. Her amount of ignorance on this subject is shameful and it is just politics as usual.

Sincerely,

Cindy Severe
