

HB 4036

Oregon Business Supports Clean Energy Transition

In recognition of the clear and present need for action on climate and low-carbon energy to protect our state's natural assets, vibrant communities and growing economy, the below businesses encourage a coordinated effort to combat climate change at the state level. Leading is what we've always done. Together, regardless of politics, we can again lead the way.

Our major electric utilities, consumer advocates and environmental organizations have come together in just this manner and forged the agreement reflected in House Bill 4036 (2016). We enthusiastically support the agreement known as the Oregon Clean Electricity and Coal Transition Plan and ask for your vote in favor of the legislation.

Looking around the nation and the world -- from the recent global agreement in Paris to the finalization of the federal Clean Power Plan -- it is not hard to see people are finally taking climate action seriously. We, business leaders of the Pacific Northwest, support transitioning coal-fired generation out of the electricity served to Oregon customers, investing in renewable energy, and reducing greenhouse gas emissions while maintaining and protecting the affordability and reliability of the electric power service on which we and our businesses depend.

Oregon should seize the opportunity to maintain a national advantage in forward-looking energy policy. We can create a healthy climate and a stronger, more resilient economy by fostering innovation, advancing public health, spurring economic development through job creation and speeding technological advancement throughout our region.

Our customers, employees and business partners recognize what a special place Oregon is, and they value working with companies that will fight to protect and improve it.

We urge our elected representatives to pass HB 4036 and put Oregon on a successful and sustainable path to the future.

Sincerely,
