---

Hello, Kristen. I left a voice message to find out about getting some time to talk to the Governor about some negotiations that are going on between electric utilities and certain non-governmental organizations about an increase in the renewable portfolio standard percentage, and a prohibition on the use of out of state coal. **We (at the public utility commission) have some deep concerns about these negotiations because we think they will not be effective in reducing carbon emissions, but they will be expensive to consumers.** I'd like to talk to the Governor about these concerns and other options she might want to consider. I left my direct dial telephone number in the voice message. Thank you.

Best,  
Susan
