---

Hello, Kristen. I left a voice message to find out about getting some time to talk to the Governor about some negotiations that are going on between electric utilities and certain non-governmental organizations about an increase in the renewable portfolio standard percentage, and a prohibition on the use of out of state coal. We (at the public utility commission) have some deep concerns about these negotiations because we think they will not be effective in reducing carbon emissions, but they will be expensive to consumers. I'd like to talk to the Governor about these concerns and other options she might want to consider. I left my direct dial telephone number in the voice message. Thank you.

Best,  
Susan
