

Heavy Equipment Training. Effective. Efficient. Easy.

BTI is offering cutting edge Heavy Equipment Operator training and driving positive and sustainable change in our communities.

Our courses are suited for beginner or experienced operators who want to train on heavy equipment such as Graders, Dozers, Haul Truck, Excavators, Wheel Loaders and more. Participants will learn, both in our high-tech CAT Simulator lab and in the field, running equipment side by side with our experienced instructors. In addition to operation, participants will learn safety, preventative maintenance and other related construction skills.

Simulators allow new operators to train on machine operation, gain application knowledge, and develop skills in a controlled and safe environment; while allowing experienced operators to refine skills, break bad habits, and address progress through the virtual training exercises.

Simulator training combined with field experience provides a superior quality training experience.

Operators who pre-train on CAT Simulators retain more information during training, perform more efficiently on the actual machines, and become safer, more productive and qualified operators.

Baker Technical Institute

Heavy Equipment Operators School

Dig in and gain traction toward a career in a growing industry now!

The Baker Technical Institute (BTI) Heavy Equipment Operator trainings are developed in partnership with industry to ensure they are comprehensive, relevant and respected by employers. BTI students are taught to operate heavy equipment through a state-of-the-art learning environment that uses the latest technology available through the use of CAT simulators combined with classroom instruction using curriculum from Caterpillar and the National Center for Construction Education and Research (NCCER), with in-the-seat operation alongside our industry instructors at a simulated job site.

These courses provide participants with the necessary knowledge, skills and abilities required in the safe and efficient operation of specific pieces of heavy construction equipment and in preventative maintenance.

Training is currently available on the following equipment:

Bulldozer
Excavator
Wheel Loader
Grader
Haul Truck
Feller Buncher
Log Loader

Upon successful completion of the course, participants will gain certificate of completion through BTI and have all the performance records of field tasks completed to CAT standards.

In addition to operating heavy equipment, students are also taught:

Heavy Equipment and Component Identification
Safety
Grade Reading
Site Layouts
Heavy Equipment Maintenance

Additional Trainings and Certifications

MSHA-

Mine Safety and Health Administration

* New Miner Training

* Annual Refresher Course

HAZWOPER-

Hazardous Waste Operations And Emergency Response

TIMBER and MINING Specific Heavy Equipment Courses

WELDING AND FABRICATION for Heavy Equipment

FLAGGER TRAINING
