

Thank you Senator Dembrow and members of the committee. My name is Dana Visse and I am a steering committee member of the Eco-School Network, where we volunteer in schools throughout Oregon to improve green practices of schools largely in the Portland metropolitan region. Each day at my school I help run a program that recycles and collects all recoverable food and material waste. We work hard to take steps to care for our environment and yet when students walk out the door of the school they breathe air in Multnomah County that is the fifth worst in the country for diesel emissions.

I come here today as a parent of young children living in southeast Portland. I grew up in Beaverton and have taken great pride in the achievement of our state with our pioneering history of implementing such novel concepts at the time as the first bottle bill, a statewide land use planning system, and the protection of beaches for public use. In recent years I've been appalled to learn that our great, green state has a dirty diesel secret. We have become a state where old diesel trucks come to die. I see parents of kids with asthma suffer. I see my own brother, who has asthma; unable to live in Oregon because every time he visits his asthma gets horribly activated. He lives in California where we can literally breathe easier. And I shudder to think of the 50% of school children that still ride the bus to school every day choking on diesel fumes of old, outdated buses. But it doesn't have to be this way...

I see this session as an opportunity for our state to catch up with neighboring states to address the fact that our state has the sixth worst diesel emissions in the country. That's not so pioneering or green. As neighbors and parents at the same elementary school that is located near an industrial nickel emissions hotspot in southeast Portland, we are sick of poor air. Vivian Christensen and I wanted to do something about it so we started a petition through MoveOn.org. In just two weeks we collected 3,125 signatures of people throughout the state who agree with this message. We are here today as messengers of those 3,125 people to pass on this message:

Please support a statewide diesel standard during the 2017 legislative session to require

clean diesel engines that don't cause unhealthy air pollution.

Further, please fund engine upgrades! The VW settlement is the right tool for the job. Without adequate funding, old engines will linger for too many years.

Oregon's air is unhealthy and harming vulnerable Oregonians. The cause is preventable mobile and industrial pollution. The biggest and most harmful source of air pollution is dirty diesel engines. Heavy metals and other toxics stick to fine, sooty particles in diesel emissions that can make their way deep into our bodies where they can cause cancer, heart attacks, asthma attacks, stroke, infertility, and more.

Thankfully, there is a clear solution: Oregon needs a statewide diesel emissions standard (like our neighbors CA and WA have) that requires cleaner-running diesel engines. New diesel engines (built after 2007) run quite clean (with up to 95% less pollution); the problem is diesel engines last a l-o-n-g time and Oregon doesn't require the new technology. Older diesel engines contribute to 60-70% of Oregon's particulate pollution (DEQ).

If we don't take action, Oregonians will be stuck with dirty diesel & dirty air for decades to come. Don't let that happen. Oregonians deserve to breathe clean air all the time wherever they live, work, and play.

Oregon is a great state. And we are a great state because we care about is future and have the leadership of citizens and representatives to take corrective action when that great, green future is in jeopardy. Please support and pass SB 1008. Thank you!

Dear The Oregon State House, The Oregon State Senate, and Governor Kate Brown,

We are pleased to present you with this petition affirming this statement:

"Please support a statewide diesel standard during the 2017 legislative session to require clean diesel engines that don't cause unhealthy air pollution.

Further, please fund engine upgrades! The VW settlement is the right tool for the job. Without adequate funding, old engines will linger for too many years."

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,

Dana Visse & Vivian Christensen with Neighbors for Clean Air

Please make time to consider this legislation. Air quality where I live and work is very important to me. I've worked in the NW Industrial area of Portland, OR for almost six years. Over the last 2-3 years the air quality (not good to begin with) has dramatically decreased due to the influx of these dirty diesel trucks. There is rarely a day that I don't notice the smell of diesel in the air outdoors near my office. Some days it is so bad my eyes burn and I choke to breathe as I walk from my car to the office door. It wasn't like this when I started working out here. Now, if I want to take a walk on my lunch break, I have to drive into the neighborhood a few miles just so I can breathe the air. Please make this a priority in 2017! Sincerely, Emily Bean-McFaddin

It is insane for all Oregonians in urban areas to need to have DEQ checks for their vehicles when there is no control over Diesel emissions in our state. Diesel pollution is noticeable everywhere because it is so strong. We need to bring this under control and gradually reduce it. There is no current regulation to force diesel vehicles to keep their emissions under control. AND THIS MUST END NOW.

in all the Red counties it's legal to burn household garbage (piles/barrels). even the illegal items, beds, sofas, chemicals..., the sheriffs will not respond or ticket the individual. i'd estimate OR has at least 2000 of these fires per day except on heavy rain days. these are facts, where is the corporate media investigating this? where are our legislators and governor?

This is an urgent issue in the St Johns neighborhood of Portland. We have a middle school playground on Columbia Blvd, a busy truck route. And we have another busy truck route going thru the heart of St Johns commercial & residential area. We need to build a new bridge from US 30 to the truck loading/distribution area, but there is no money or political will to do so. That's why this issue is so important to the children of our communities. They deserve a healthier childhood!

We need to do more to ensure that we have clean air to breathe! This won't happen if we leave it up to company's to "do the right thing". It is not in their financial interest to do so and it goes against the primary role of company's which is to get the highest financial return for their shareholders. They do not care about the people.

I just spent a month with a lung infections, missing some 80 hours of work, not counting weekends.. I don't, nor never have smoked..and never missed more than 4 days of work in a row..ever. I'm not saying I got this from Pollution, but cleaner air would be helpful. And besides, don't YOU like clean air? I like that AND clean water.. Efficiency means less waste, less waste = more long term profits. Environment and Business have common ground here.

From our newest babies to our most senior citizens, we all need, and deserve, clean air. It's time for a state-wide diesel standard in Oregon and for clean engine laws. These two laws will immediately give us cleaner air and bring relief to many in our communities whose health is suffering due to the current unregulated emissions from diesel and dirty engines. Let's pass these laws and make Oregon a state where everyone can breathe free!

There is no reason why we should even be using petrol or fossil fuel products we can run cars, trucks, and trains on solid hydrogen as demonstrated by Stan Ovshinsky. We can fly planes on biodiesel, and make plastic like products from biomass and cellulose products so there is no reason why we should be using petrol products at all. So please stop drilling for oil, fracking for gas, which pollutes the atmosphere and destabilizes the earths crust by drilling and fracking. We need to move toward a sustainable and renewable future.

I remember 40+ years ago when I lived in Calif we would have to go to a gas station or auto mech and get our exhaust/engines checked for emissions and we'd walk out with a little form that you'd then have to produce when you got your car re/registered. It was cheap and simple , only took minutes to do and was a no-brainer. I've lived in rural Gold Beach my entire years in Oregon and we have Nothing like that here but believe me , we need it! Lots of old black smoky diesels on the road!

As a owner of the truck, a car, and a tractor, I must insist that there be a way to very affordably modify or retrofit older diesel engines so that they continue to operate as I cannot afford to buy a new diesel! They're more expensive to buy, more expensive to maintain and more expensive to repair and do not necessarily get higher mileage. My tractor is a final tear for diesel engine with particulate filter but my truck and car or early 2000's technology and I do not like the new vehicles as Volkswagen lied for their clean diesel's and the Ford trucks are not what I want to drive or own

It's about time to make filthy diesel exhaust a thing of the toxic past, especially for those incredibly selfish, ignorant 'Coal Rollers' who somehow feel clean air is an 'elitist' thing, so they blow tons of heavy black diesel smoke onto drivers of less polluting vehicles -- pure stupidity!

School buses are big users of diesel fuel. It seems they are always belching black smoke. Logging trucks and dump trucks are also big sources for anyone who uses them or lives near a highway. Lietrally sick of it. Do something useful for the public's health, please.

The car and truck companies have long known about this problem and it's long past the time when more stringent standards should have been put in place. The companies, and the buyers of their vehicles, should not continue to be permitted to externalize the real costs of diesel emissions onto the suffering public.

Deb Evans
Ashland, OR 97520
Feb 25, 2017

Let me add that in addition to needing a statewide diesel standard to counter lung and health issues, I find it deplorable that Oregon has emission control standards for only a minuscule portion of the state! Just drive down I-5 to no longer be able to see the glorious mountains on either side. And, yes, I and my children and granddaughters all suffer from asthma as well as my daughter-in-law!

It is appalling that Oregon allows individuals and companies to buy older , dirtier polluting diesel vehicles from other states which have stronger pollution standards than our state and then allows these toxic emissions into our environment. We not only need a diesel standard -- we need a **STRONG** diesel standard. Get rid of the older vehicles, or legislate for engine upgrades so that these poisonous engines are retired forever. Take a positive step for the health of our people and our environment. Support clean air.

I live in Central Oregon , a lot of diesel pickups do not run clean , many use farm fuel which isn't as clean as regular diesel. There needs to be some rules to protect the environment and ones own breathing when a dirty running rig passes on road.

We have a responsibilities to meet and hopefully exceed air safety standards. We must leave our air and lands cleaner than we were given for future generations. We need to assure that all contributors to air quality meet or exceed standards. Asthma and other pollution related illnesses effect many Oregonians. Which, ultimately is costly in health care expenses in Oregon. We need to protect those vulnerable

We cannot afford to delay any longer. Please pass new standard to restrict diesel emissions right now!

Kathy Lynn Zane
Portland, OR 97280
Feb 25, 2017

Nicholas Tennant
Ashland, OR 97520-2926
Feb 25, 2017

Citizens with asthma and other lung challenges deserve to have their public air free of diesel particulates. The threat to life and the extra expenses for medicines can be decreased if Oregon Clean Air laws match those of Washington and California. Deaths from asthma and ER asthma visits will decrease when Oregon finally makes clean air a priority.

Dirty diesel trucks are the worst air polluter in Oregon (Oregon Environmental Council), causing cancer, brain damage, and birth defects. // We're getting old, dirty diesel trucks from California, since CA and WA have much higher standards. // Please support an Oregon diesel standard this year and fund engine upgrades with the VW settlement.// Thank you.

There seems to be a really smelly and smokey truck, big or small on the road that becomes very obvious a couple times a day. Sometimes just being in one's yard as a construction truck goes by, makes it imperative to stop inhaling and walk or run away.

Go beyond diesel for ensuring our air is clean! I find the air quality extremely poor within the city limits. Auto vehicles affect air quality, but industrial manufacturing plays a big part, too, and they should not be allowed to operate in dense population centers.

Diesel emissions are one of the most severe health risk we face in Oregon. This does not just apply to the large urban areas, but diesel trucks in my local community of Lincoln City can be overwhelming if you are driving behind a typical diesel truck on the highways. Please correct this problem Paul Katen

Please support a statewide diesel standard during the 2017 legislative session to require clean diesel engines that don't cause unhealthy air pollution. Further, please fund engine upgrades! The VW settlement is the right tool for the job. Without adequate funding, old engines will linger for too many years.
