

I am writing in support of HB 2739. I'm a health coach and an organic gardener of many years. ALL my experience points toward organic methods producing superior results in what's grown, the effects on those who eat organic produce, and in the sustainability of the soil and living organisms that benefit the ecosystem. It's well documented that GMO crops drift and contaminate organic land, and conventional farming methods are NOT sustainable. Organic businesses need to be protected!
