

Good evening, Ms. Freeman~

I just learned you will be voting on a bill tomorrow that would protect Oregon's farmland by creation of GMO Free Zones.

I urge you to take this seriously! If we cannot protect our crops & land (insects, water & animal life) from insidious GMO's, we will lose biodiversity little by little until our lands are wastelands.

It is no joke.

I live in Portland, yet it is my dream to own a tiny home on a piece of land I can establish a Community garden on; helping people grow good food & eat healthy will be impossible if GMO's are allowed to persist. They are like a cancer and will kill everything, eventually.

Please give me some hope. My faith in those who have a "bigger" voice is at a very dismal low at this time. I pray there are more besides Jeff Merkley that are part of this fight. I hope you're one of them.

Thanks for listening.

Peace & blessings~
