

March 24, 2017

Testimony from Beven Byrnes, Principal of Bridges Middle School, to Oregon Senate Environment and Natural Resources Committee urging unanimous support of SB 995.

My name is Beven Byrnes. I am the Principal and Executive Director of Bridges Middle School, a nonprofit school in Portland serving students with a variety of learning differences. I am also a resident and mother to four in the same 97211 zip code. I have worked in Portland's nonprofit sector serving our most vulnerable populations for over 20 years. **I am here today because I believe that all Oregonians have a right to know what toxins are being emitted by the businesses in their neighborhood.**

I recently learned just how urgently SB 995 is needed when I learned about toxic hydrogen sulfide in the air of our neighborhood that our staff and students have been unknowingly exposed to since relocating to our North Portland building in 2013. Through a recent public meeting hosted by DEQ – *that we were invited to by members of our local neighborhood association* - we learned about two oil re-refineries in our neighborhood that have been allowed to continue operation years after a known lapse in DEQ permitting and discovery of the undocumented removal of air toxin purifying systems at these sites.

EPA testing conducted at and around these sites in 2015 and 2016 verified four chemicals exceeded the chronic health benchmarks used by the EPA, including Hydrogen Sulfide, the culprit of the Big Stink in North Portland may have heard about. When inhaled, hydrogen sulfide is known to cause symptoms including persistent headaches and nosebleeds - symptoms frequently experienced by our students and staff.

Under current regulations, Oregon's environmental protection agency does not require nor collect detailed air and water pollution emissions data from business like these oil re-refineries. This creates a crippling disadvantage to the very government agencies that are charged with monitoring these polluters for the public. SB 995 fills this gap.

Bridges Middle School supports SB 995 because it creates opportunities for government agencies and the people they are charged to protect - like our sensitive students and the dedicated staff members who serve them - to know what pollution is going into the air they breathe and water they drink. Communities and public officials need this data to understand and communicate the location and risk levels of toxic chemicals that damage human health and the environment. Schools need this information to inform families as soon as a potential health risk is identified. SB 995 provides this opportunity.

On behalf of our students, their families and our staff, I urge you pass this bill out of Committee with a strong recommendation for adoption. *Our children deserve better. Oregon can do better. This bill gives Oregon's authorities the data needed to do better.*

I thank you for your time and consideration. I hope you all agree that our children are worthy of your unanimous support.

Beven Byrnes

Principal/Executive Director
