

Dear Senate Health Committee,

Our daughter has a vaccine induced brain injury. Our daughter received the DTaP vaccine at 4 months. We took her back a few days after the shot because she wouldn't stop crying. Now we know this is a symptom of brain swelling and injury and autism is caused by brain swelling. We never where informed of the VAERS and now at age 6 almost 7 the statue of limitations is up. We learned of it just recently.

Sincerely,
Mason White
