

Testimony submitted via email.

Hi there. I work as a psychologist in Hood River, OR. HB 3355 is up for hearing on 4/5. This is an important bill because

1. There is a shortage of professionals who are trained to diagnose and effectively treat patients with persistent mental illness.
2. Adding specially trained psychologists will increase capacity and access statewide - and particularly in rural communities.
3. This change promotes health care transformation efforts to integrate physical and mental health in primary care.

Please support this bill.
