

Greetings,

My name is Debbie. I am writing in support of SB 215. This bill makes sure my 10 year old daughter Lilly receives proper care in an emergency situation as prescribed by her endocrinologist. A database like ORDERS will help so much in that process.

Lilly has Primary Adrenal Insufficiency (also known as Addison's). Managing the disease is stressful enough day to day, but when I have to take her to ER it is another whole ball of wax. I have no idea what care she will get when I take her in. People with her disease are only 10 people per million. Most doctors do not know about this disease. And if she is not treated quickly, it can very rapidly become fatal. If I had the assurance going to the hospital that she would receive proper care, it would be a great sense of relief.

Please vote yes in Senate Bill 215!

Sincerely,

Debbie
