

Subject: HB 2644

To Whom it may concern,

I am writing in opposition to HB 2644 in reference to changing the law allowing either an injection of vitamin K or oral vitamin K to "most effective means." I do not believe this law needs any changing. Please continue to give Oregon parents the right to make informed medical choices for their own children with the medical provider of their choice. There are risks and benefits to any and all medical procedures and medications. Parents must be given informed consent. Where there is risk, even small risk, there must also be choice. Thank you!
