---

As a life-long Oregonian, I have seen growth in population, with some progress in managing the growth and pollution that has come along with it. Our energy from wind, hydro, and solar is beginning to replace fossil fuels. Some people are choosing less polluting vehicles. But the fact remains, we have to do better.

SB557 can get us a jump start to a cleaner Oregon, by capping the polluters and creating jobs in clean energy for rural areas. We must do more if we want a healthy future for our children and grandchildren. Please pass SB557 out of committee for a positive vote.

Thank you.
