Subject: Constituent Testimony in Support of Clean Energy Jobs
Date: Wednesday, April 12, 2017 2:49:15 PM

I am a 21 year-old college student living in Portland. If we do not take action on climate change, I may live to see the polar ice caps melt. It is very important to me that Oregon take the lead in showing the country that we can build a clean energy economy that increases racial, economic and gender equity at the same time as it protects our environment for future generations. I want to express my strong support for SB 557 and HB 2135, and I hope that all members of the House Committee on Energy and the Environment and the Senate Committee on Environment and Natural Resources vote to advance them.

Thank you for considering my testimony,

Anthony Bencivengo
