Subject: HB2644

In every one of these bills that have to do with “injections” or vaccines, the mothers have provided excellent scientific information to make their point. On the other side are medical agencies that will get some kind of a bonus or payoff if this bill passes, as will all Oregon congressman who do their bidding. As was pointed out in a previous testimony, America has the worst health care outcomes in all developing countries. Countries with the lowest infant mortality **do not vaccinate infants** and they use the vitamin K drops. There is no need for the rewording of this bill which removes **choice** from young parents. Are you looking for problems to solve? There are plenty of them, but this issue ain't it!

There is no “public health” in this. There is greed, lack of ethics, and a big disconnect in the Oregon legislature with people it is supposed to serve.

Sincerely,

Dixie Gainer
Nehalem, Oregon
