

I am submitting my public input on *SB1008, the proposed rules to limit the deisel and other toxics. As an asthmatic, and as a teacher, I see first hand what deisel and these other toxics do to our health. I have asthma, and asthma. O.plications, due to exposure to toxics. A blood test showed higher than normal levels of Cadmium. It was suggested it is likely that from Diesel exhaust that has exposed me to high levels. I am scared about the k creased trucks on the road (from the port closing) and what that will do to my health. I have already been to the hospital twice as much this year than last. I have had to move from my home, which was ext to I-57 in an attempt to improve my health.*

As a teacher I see more and more students with asthma and health problems. These aren't the obese students either.

Please pass this proposal and keep working to ensure the public's health.

*Thank you,
Christina Thompson
