

I am a resident of Jackson County, and I support HB 2739. I don't want our valuable organic crops contaminated by neighboring GM crops, and should such contamination occur, the damaged farmer should be able to sue the manufacturer of the contaminating plants for damages. Our valuable crops should not be barred from entering prospective buyers' countries because those countries will not tolerate GM contamination, and our organic crops have been contaminated. I ask that my comments be submitted into the public record.
