Subject: SB990 NO!

Thank you for this opportunity to voice my objection and my recommendation that you vote not to pass on to the floor SB990. The voters rejected nuclear energy and this bill goes against their wishes. There has been no advances in safe storage of spent fuel rods since their vote.

There is little difference between many small radioactive sites and one large one. They still present a potential health danger to Oregonians and should not be considered.

Please concentrate your energy on providing the energy needs of Oregonians with clean renewable energy instead of hazardous forms of energy.

Thank you,
